9, Avenue des Hauts-Fourneaux
L-4362 Esch-sur-Alzette (Belval)
Luxembourg

Awesome Guru Wanted
('PAID_INTERN' || 'PERMANENT_CONTRACT')

Offer Overview

We are looking for cutting-edge full-stack engineer who are willing to take responsibility in a powerful startup environment. Your responsibility will be developing and enhancing our innovative technology in close and direct cooperation with the founding team.

```
if (
  me.props.institution = 'EPITECH' &&
  me.props.geek = true &&
  me.props.skills.some(x =>
    x === 'MV*' ||
    x === 'API' ||
    x === 'NODE') &&
  me.props.languages.contains('ENGLISH') &&
  me.props.languages.length > 1 &&

  me.love('BEER' || 'CHEESE') &&
  this.isRealProgrammer('https://xkcd.com/378/')
) {
  me.setState({
    'location': 'Luxembourg'
    'contact':  'hello@yotako.io'
    'contract': 'PAID_INTER' || 'PERMANENT'
  })
}
```

This involves among others the design and implementation of APIs, work with NodeJS in JSON-based communication systems, testing frameworks as well as latest MV* flavors as Angular*, React or Vue.

We offer you the opportunity to develop your career working on projects you are passionate about. We invest in you and your skills and we foster a strong growth culture for each and every one of our employees.

We are a truly international team.

Your tasks

- Work closely with designers, back-end and front-end engineers in order to create a state-of-the-art product for our customers
- Follow the planning, respect the architecture, integrate and develop efficient and transferable front-end features/systems
- Develop web applications using various JavaScript frameworks
- Pay attention to detail and potential performance weak spots
- Find and share front-end best-practices with team members and other developers
- Innovate

Opportunity to be part of a growing team (professional career) and a big success story

Skills & Requirements

- You have experience with Javascript (and frameworks like Backbone, Angular, React), semantic HTML5, CSS3 (and a CSS preprocessor of your choice)
- You have experience in real projects (either real working experience or open source projects)
- You know that mocha is not just a type of coffee and chai not just tea
- You have experience with automation tools like Gulp, Webpack, Grunt or Yeoman
- The quality of your code is important to you
- You are creative and have a sense for good design and user experience
- You have experience using GIT
- You possess very good language skills in English. Any additional language is highly appreciated
- A strong experience with Nerfs is a plus
- Bonus: experience with Isomorphic JavaScript and Server Side JavaScript
- MegaBonus: You are a real programmer (https://xkcd.com/378/)

Our offer

- You will become part of a highly motivated and professional interdisciplinary team of development, user experience, research, marketing and operations experts
- You gain the unique opportunity to experience and shape the setup of a recently founded company
- You can grow with a high degree of freedom, with a unique chance of driving the international growth with your own ideas and creativity
- Flexible working time including remote
- Free choice of equipment and operating system
- Experience and shape a communicative, creative and stimulating working environment
- Perfect environment for your personal and professional development
- Full-time contract
- A very interesting salary package according to your experience

About Yotako

Yotako (formerly Visual Scaffolding), a young awarded startup, is changing the way web and mobile apps are created today. If you are reading this, you probably know what we are doing. With a mixed team of scientific and industrial backgrounds, we aim to contribute to the future of the web. Our main scientific expert, based in Luxembourg, has contributed to the top international projects in his field and has been involved in international research projects for the last 5 years. Our Portfolio currently includes companies from all over the world.
